

ALBUM WORLD WAR I REHABILITATION (PRIMARY SOURCE LEARNING ACTIVITY)

Album Description

This learning activity uses multiple types of sources to learn about the Rehabilitation Act of 1918. In addition to looking at what became of disabled soldiers when they returned home, the activity also asks students to examine ideas about disability.

*Note: Before starting this exercise, discuss respectful language and historical terms (like crippled) which are considered offensive today.

Consider starting with the [Observe, Reflect, Question approach](#) to analyze the photographs, manuscripts, and newspaper articles.

Background Information

-The Institution for the Crippled and Disabled started in 1917 as a charity program in New York City run by the American Red Cross. They were inspired by the rehabilitation work being done during World War I in Europe, which the Red Cross was also involved with. In 1919, the Institute released a poster series promoting the rehabilitated of disabled soldiers. I've included a couple of them in this album, but 18 posters can be found on [the LOC website](#).

-In 1918, Congress passed the Soldier's Rehabilitation Act (also known as the Smith-Sears Act) to provide federal money to train/reeducate disabled veterans and help them find jobs. In 1920, the Civilian Vocational Rehabilitation Act (also known as the Smith-Fess Act) expanded these rehabilitation programs to all disabled Americans, including civilians. [This website](#) provides a nice overview of major disability-related laws, including these rehabilitation acts.

-Additional information about World War I rehabilitation programs can be found in this [LOC exhibit on World War I](#).

Potential Discussion Questions

1. What was the purpose of the 1918 Rehabilitation Act? What did lawmakers hope to accomplish for individual disabled people and for the country?
2. What factors influenced this rehabilitation act being passed during World War I, instead of during a previous war?
3. What was the purpose of the poster series? Who do you think was the intended audience?
4. What ideas about disability were expressed in these photographs, posters, and laws? Provide specific examples from the sources.
 1. This could be a good place to introduce students to the medical/rehabilitation model of disability. There's a good description of it (including a helpful illustration) [here](#).
5. What does the term "usefulness" mean in this context? Why do you think it was important to people to be considered useful?

Additional activities:

1. Students can research additional articles about rehabilitation in [Chronicling America](#). Encourage students to look at how rehabilitation changes over time.
2. Students can conduct research in the [Veterans History Project](#) to learn more about veterans' experiences with rehabilitation programs. The project includes interviews with veterans from WWI, WWII, Cold War, Korean War, Vietnam War, Persian Gulf War, Afghan War, and Iraq War.
3. If you want to do a deeper dive on ideas about rehabilitation during WWI, [this blog post](#) from the New York Academy of Medicine Library provides more information. You can find [Douglas McMurtrie's *The Disabled Soldier*](#) (referenced in the blog post) in the LOC collections.

This source set can be put into conversation with:

-lessons on the impacts of World War I

-discussions about the changing role of the government in Americans' lives during the Progressive Era

Alt text for the photographs is available on the LOC website. Alt text for the newspaper articles is available in the reference note section for each source.

Teaching Notes:

TRAINING WOUNDED, DISABLED SOLDIERS NOW BEING STUDIED (PENSACOLA

JO
PG

TRAINING WOUNDED, DISABLED SOLDIERS NOW BEING STUDIED

Washington, June 29.—Every man who goes in the army or navy is now certain that if the Germans "shoot him up" he will not be compelled to sell pencils, or shoe laces to eke out an insufficient pension, or be immured in a soldiers' home to rush out the years until death comes to his relief.

The United States government has studied the whole subject of vocational rehabilitation of wounded and disabled soldiers. The experience of all the belligerents has been gone over carefully and the marvels of re-vocational education accomplished by some of them are fully noted and the federal board for vocational education has been at work on the proposition since August, 1917. The result is the Smith-Sears act, which passed congress June 11, and provides a comprehensive scheme of rehabilitation for wounded and disabled men.

Canada has been doing this work with great success and all of the Canadian experience has been freely given to the United States. The director of that work has been actively cooperating with the federal board for vocational education and was sent by his government to appear before the senate committee and testify at the hearings of the bill, which passed both senate and house without a dissenting vote.

It has been demonstrated in Canada and Europe that no matter how badly a man may be wrecked physically, as a general rule he still has latent capabilities for something useful. If those capabilities may be specialized into some line of trade the wounded soldier already knew, that is done. The experience he has had and his knowledge of the trade is a valuable foundation to build upon.

If the trade he is familiar with does not offer an opening then he is induced to enter an allied trade where his previous knowledge will be of value. In some cases the man is entirely re-educated and for an occupation entirely different from that which he had previously followed.

It is seldom that a man is so badly shattered that he cannot be trained to something useful, which he can pursue in the consciousness that he is doing a man's work for a man's pay and that he is back in the current of civil life, a useful and happy citizen who asks no odds of anyone when it comes to making a living.

The task to be discharged by the federal board of vocational education is a large one. Figures from the various countries show that for each million men in the armies, there will be one per cent, or ten thousand men, to be re-educated. This does not include the wounded who are able to and eventually do return to their occupations.

This does not necessarily mean that

LEMON JUICE TAKES OFF TAN

Girls! Make bleaching lotion if skin is sunburned, tanned or freckled.

Squeeze the juice of two lemons into a bottle containing three ounces of Orchard White, shake well, and you have a quarter pint of the best freckle, sunburn and tan lotion and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of Orchard White for a few cents. Massage this sweetly fragrant lotion into the face, neck, arms and hands each day and see how freckles, sunburn, windburn and tan disappear and how clear, soft and white the skin becomes. Test! It is harmless.—Adv.

these are "dismemberment" cases. The general idea is of the legless, armless or sightless man. They are far in the minority. The figures, which have now not down to fairly accurate averages, show that of the 10,000 half of them will be purely "medical," as against "surgical" cases. And of the 5,000 that are "surgical," that is, which need the attention of a surgeon as against a physician, 500 will be cases of dismemberment, which the men have lost members of the body. Three hundred will be cases where a leg has been lost and two hundred where arms have been lost. In 41,000 returned invalided Canadians there were less than forty cases of blindness.

The real problem is the man who has suffered profound shocks to his system and perhaps been rendered incapable of standing the strain of his former occupation. A soldier, maker, for instance, comes out with shell shock and his nervous system is shattered. He could not stand the racket in a boiler factory, but he, with his knowledge of iron and steel working could very easily be made into say an expert lathe operator where there is no noise. And so on along the whole line of readjustments.

The federal board for vocational education is the source of most of the war training courses and is going ahead with plans to begin the re-educational work at an early date. It is proposed instead of concentrating the men to be re-educated in large hospital schools, to use the wonderful facilities afforded by the many technical and agricultural schools of the country as far as possible.

HEAVY GERMAN LOSSES ADMITTED BY PRISONER

With the American Army in France, June 27, disclosure of the heavy German losses in the present offensive offers is obtained from German war prisoners. From one of them it has been learned that the seventh German division of reserves lost about 1,200 men in a fruitless attack on Ypermont. This may explain why the German commander, on the following day, withdrew that division from the firing lines.
